## LIVING WITH CAVERNOMA

This year I am looking forward to working more with the 'European Cavernoma Alliance', and getting the covid vaccine.

***“Surgery during lock-down was somewhat different. Luckily it did not have to be done as a virtual appointment!”***

In August I had brain surgery to remove a meningioma, as it had grown in size. Surgery during lock-down was somewhat different. Luckily it did not have to be done as a virtual appointment!

The year has brought a lot of changes. Some for the good - webinars talks/speakers/get-togethers to attend in Ireland and many other countries.

The joy of not having to sit in a hospital outpatients' clinic for hours, after traveling 120 km to be there.

This year I am looking forward to working more with the 'European Cavernoma Alliance', and getting the covid vaccine.
